

Children's Weight Status Calculator

This chart helps you calculate your child's weight status. It's best if you calculate your child's weight status every 3 months and track over time. You can also do this online at pro.healthykids.nsw.gov.au/calculator.

HOW TO USE THIS CHART

- Make sure that you have chosen the correct chart for your child's age and sex. This chart is specific for boys aged 2 to 18 years old.
- Measure your child's height in metres and your child's weight in kilograms.
 - Write your child's weight (in kilograms) here:
 kg
 - Write your child's height (in metres) here:
 m
- Work out the body mass index (BMI) using a calculator:
 - Enter weight in kilograms.
For example, enter 23.4 if your child is 23.4kg.
 - Press the divide button (\div or $/$).
 - Enter height in metres.
For example, enter 1.21 if your child is 121 centimetres.
 - Press the divide button (\div or $/$) again.
 - Enter height in metres again.
 - Press the equals button ($=$).
 - Write result here:
BMI =
- Plot the BMI on the BMI for age chart to calculate your child's weight status:
 - Find your child's age along the bottom (on the horizontal axis).
 - Draw a straight (vertical) line up from that point.
 - Find your child's BMI along the left hand side (on the vertical axis).
 - Draw a straight (horizontal) line from that point.
 - Make a dot where the two lines meet.
- If your dot is in the green area, your child has a healthy weight. If your dot is not in the green zone, your child is above or below a healthy weight. Please talk to your child's doctor for more information.

Below a healthy weight
< 5th percentile
(underweight)

Healthy weight
5th percentile to < 85th percentile

Above a healthy weight
85th percentile to < 95th percentile
(overweight)

Well above a healthy weight
95th percentile and above
(obesity)
